

POWER BI 30 DAYS COURESE

Day 8 - Formatting of Column and Bar Chart 1

What is Chart Formatting?

Chart Formatting is used to improve the appearance of a chart and make it easier to understand.

Why Use Formatting?

- Make charts attractive
- Improve readability
- Highlight important information
- Create professional dashboards

Common Formatting Options

1. Title

The heading of the chart.

Example:

Sales by Region

Use:

Helps users understand what the chart represents.

2. Data Labels

Shows values directly on the chart.

Example:

East = 5000
West = 7000

Use:

Users can see values without hovering.

3. Legend

Shows category names and colors.

Example:

- Furniture
- Technology
- Office Supplies

Use:

Helps identify different categories.

4. X-Axis

Displays categories.

Example:

- East
- West
- North
- South

Use:

Shows comparison groups.

5. Y-Axis

Displays numerical values.

Example:

- Sales
- Profit
- Quantity

Use:

Shows measured values.

6. Data Colors

Changes the color of columns or bars.

Example:

- Blue
- Green
- Red

Use:

Makes visuals attractive and easy to read.

7. Background

Changes chart background color.

Use:

Improves report design.

8. Border

Adds a border around the visual.

Use:

Separates visuals clearly.

9. Shadow

Adds shadow effect to visuals.

Use:

Makes charts look professional.

10. Gridlines

Horizontal or vertical guide lines inside the chart.

Use:

Helps users read values accurately.

Column Chart vs Bar Chart

Column Chart	Bar Chart
Vertical Bars	Horizontal Bars
Categories on X-Axis	Categories on Y-Axis
Best for few categories	Best for many categories

Column Chart

Vertical comparison.

Bar Chart

Horizontal comparison.

Steps to Format a Chart
