

POWER BI 30 DAYS COURESE

Day-1 – Introduction of Power BI

Overview of Microsoft Power BI

1. Cloud-Based Business Intelligence

Power BI is an online tool that helps businesses see and understand their data from anywhere using the internet.

2. Data Integration and Connectivity

Power BI can connect with many data sources like:

- Excel
- SQL Server
- Cloud services

It helps create reports and dashboards from this data.

3. Interactive Dashboards and Reports

Power BI lets users make:

- Interactive dashboards
- Visual reports
- Easy-to-understand charts

These help businesses make better decisions quickly.

Benefits of Using Power BI

1. Easy to Use

Power BI is simple and user-friendly.

You can create charts and reports by dragging and dropping data without coding.

2. Real-Time Updates

Power BI updates data instantly or quickly by connecting directly to data sources like:

- Excel

- **SQL Server**
- **Cloud services**

So, When the data changes, Power BI can automatically refresh and show the latest data in reports and dashboards.

Which helps Users see the latest information and make better decisions.

3. Mobile Access

You can use Power BI on your mobile phone.

You can check reports and data anytime, anywhere.

Raw Data

Raw data is the original data collected from sources like:

- **Excel files**
- **Databases**
- **Apps**

It is unorganized and not yet analyzed.

Interactive Dashboard

An interactive dashboard is a visual report with:

- **Charts**
- **Graphs**
- **Filters**
- **KPIs (Key Performance Indicators) are numbers or measures used to track the progress and performance of a dashboard or business.**

Users can click buttons, filters, or charts to explore data easily.

Downloading and Installing Power BI

1. From Official Website

Download Microsoft Power BI Desktop from the official website:

Download Power BI Desktop

Steps:

1. Open the link
2. Click Download Free
3. Install the setup file
4. Sign in with your Microsoft account (optional)

Power BI Desktop is free to use for learning and creating reports.

2. From Microsoft Store

Install Power BI Desktop from the Microsoft Store.

Steps:

1. Open Microsoft Store
2. Search Power BI Desktop
3. Click Install

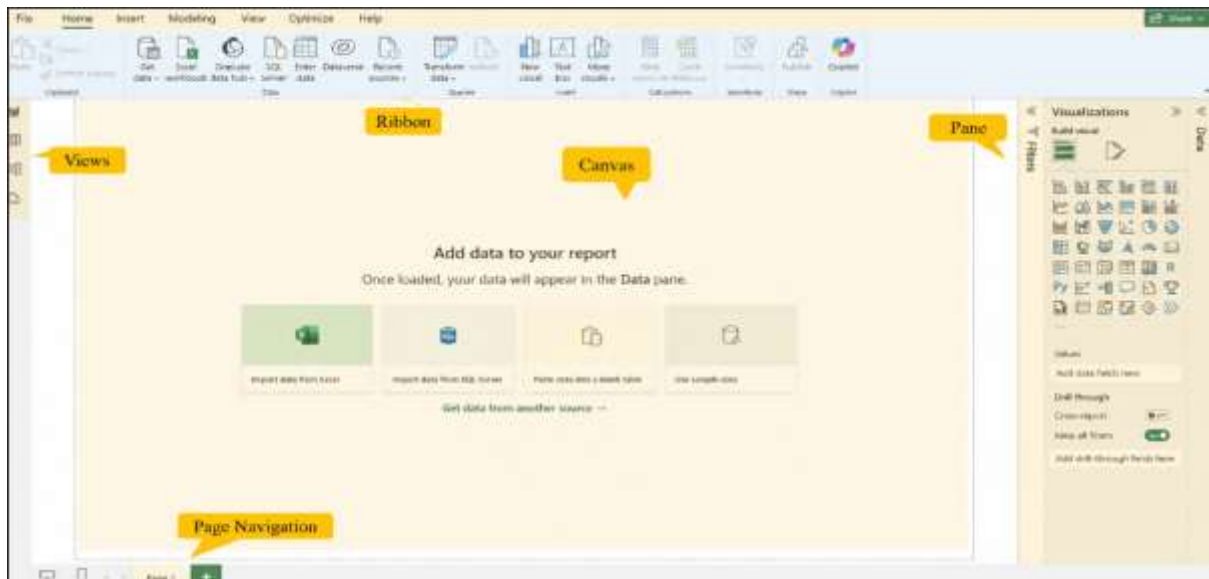

Official Store Link:

[Power BI Desktop on Microsoft Store](#)

This method is easy because:

- Automatic updates
- Simple installation
- Safe official Microsoft app

Power BI Interface

1. Tabs

Tabs are located at the top of Power BI.
They contain different menus and tools.

Examples of Tabs:

- Home
- Insert
- Modeling
- View
- Help

Use:

Tabs help users find different features easily.

Example:

- Home tab → Import data and create visuals
- Insert tab → Add charts, text, and images

2. Ribbon

The ribbon is below the tabs.
It contains buttons and commands.

Use:

The ribbon helps users perform tasks quickly.

Examples:

- **Get Data**
- **Transform Data**
- **Refresh**
- **New Visual**

Example:

Click Get Data to import an Excel file.

3. Canvas

The canvas is the large blank white area in the center.

Use:

This is the main working area where reports and dashboards are created.

On the Canvas You Can Add:

- **Charts**
- **Tables**
- **Cards**
- **KPIs**
- **Images**

Example:

Drag a sales chart onto the canvas to create a report.

4. Pane

Panes are located on the right side of Power BI.

Types of Panes:

- **Visualizations Pane**
- **Fields Pane**
- **Filters Pane**

Use:

Panes help users:

- **Select charts**

- **Manage data**
- **Apply filters**

Example:

Choose a bar chart from the Visualizations pane.

5. Views

Views are located on the left side of Power BI.

Types of Views:

- 1. Report View**
- 2. Data View**
- 3. Model View**

Use:

Views help users work with reports, data, and relationships.

Example:

- **Report View → Create charts**
- **Data View → See data tables**
- **Model View → Manage table relationships**

6. Page Navigation

Page navigation is located at the bottom of Power BI.

Use:

It helps users move between different report pages.

Example:

- **Page 1 → Sales Report**
- **Page 2 → Profit Report**
- **Page 3 → Customer Report**

Users can click pages to switch between reports easily.
