

POWER BI 30 DAYS COURESE

Day 6 - Page Formatting

What is Page Formatting?

Page Formatting is used to change the appearance and design of a report page.

It helps make reports:

- Attractive
- Professional
- Easy to understand

Why Do We Use Page Formatting?

Benefits

- Improve report appearance
- Enhance user experience
- Make dashboards professional

- Highlight important information

Page Formatting Options

1. Page Background

Used to change the background color of the report page.

Example:

- White
- Blue
- Gray

Use:

Makes reports visually appealing.

2. Wallpaper

Wallpaper is the area outside the report canvas.

Use:

Used to decorate the report page.

Difference

Page Background	Wallpaper
Inside Canvas	Outside Canvas
Report Area	Outer Area

3. Canvas Settings

Canvas is the area where visuals are placed.

Use:

- Change canvas size
 - Change canvas color
 - Adjust report layout
-

4. Page Size

Used to change report page dimensions.

Types:

- 16:9 (Default)
- 4:3
- Letter
- Custom

Example:

Mobile reports use different page sizes.

5. Page Information

Used to:

- Rename pages
 - Add page descriptions
 - Manage page details
-

6. Tooltip

Tooltips show extra information when users hover over a visual.

Example:

Hover over Sales Chart

Shows:

- Sales
- Profit
- Quantity

Use:

Provides additional details without crowding the report.

7. Filter Pane Formatting

Used to customize the Filter Pane.

Example:

- Change color
 - Change font size
 - Show/Hide filters
-

8. Selection Pane

Used to:

- Show visuals
- Hide visuals
- Arrange visual layers

Example:

Bring image to front or send it behind a chart.

9. Align and Arrange

Used to organize visuals neatly.

Options:

- **Align Left**
 - **Align Right**
 - **Align Top**
 - **Align Bottom**
 - **Distribute Evenly**
-

10. Themes

Themes change the overall look of a report.

Example:

- **Default Theme**
- **Dark Theme**
- **Custom Theme**

Use:

Apply consistent colors and formatting.

Common Formatting Options for Visuals

Title

Adds a heading to a chart.

Example:

Sales by Region

Background

Changes visual background color.

Border

Adds a border around visuals.

Shadow

Adds shadow effects to visuals.

Font

Changes:

- Font Style
 - Font Size
 - Font Color
-

Data Labels

Displays values directly on charts.

Example:

Sales = 5000

Legend

Explains chart colors and categories.
